""" "Genetic variation in mouse apolipoprotein A-IV due to insertion and ref deletic variation in a region of tandem repeats.";

RI J. Biol. Chem. 266:12715-12721(1991).

CC -i- FUNCTION: MAY HAVE A ROLE IN CHYLOMICRONS AND VLDL SECRETION AND CC CATABOLISM. REQUIRED FOR EFFICIENT ACTIVATION OF LIPOPROTEIN CC LIPASE BY APOC-II; POTENT ACTIVATION OF LIPOPROTEIN CC LIPASE BY APOC-II; POTENT ACTIVATION OF LCAT. APOA-IV IS A MAJOR CC COMPONENT OF HDL AND CHYLOMICRONS.

CC -I- SUBCELLULAR LOCATION: EXERGELULAR.

CC -I- SUBCELLULAR LOCATION: EXERGELULAR COLOR THE THIRTEEN 22-AMINO ACID TANDEM REPEATS (EACH 22-MERIS) COCURRING IN THIS SEQUENCE ARE PREDICTED TO BE HIGHLY ALPHA-CC MERS) OCCURRING IN THIS SEQUENCE ARE AMPHIPATHIC. THEY MAY THEREFORE SERVE AS LIPID-BINDING DOMAINS WITH LECITHIN:CHOLESTEROL ACYLTRANSFERASE (LCAT) ACTIVATING ABILITIES.

C -I- POLYMORPHISM: THERE IS A POLYMORPHISM WITHIN A SERIES OF IMPERFECT OF POLYMORPHISM: THERE IS A POLYMORPHISM WITHIN A SERIES OF IMPERFECT OF 12 NUCLEOTIDES HAVE GIVEN RISE TO THREE FORMS CHARACTERIZED BY THREE (139), FOUR (C57BL/6), OR FIVE (M.CASTANEUS) COPIES OF THE SEQUENCE E-Q-(AVI-Q-). INSERTIONS OR DELETIONS OR DELETIONS OF IMPERFECT OF THE SEQUENCE E-Q-(AVI-Q-). INSERTIONS OF THE SEQUENCE E-Q-(AVI-Q-). INSERTIONS OR DELETIONS OF THE SEQUENCE E-Q-(AVI-Q-).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RECEPTOR EXPRESSION IN THE ENDOMETRIUM. THIS RESULTS IN THE SUPPRESSION OF THE DUISATILE ENDOMETRIAL RELEASE OF THE LUTEOLYTIC SUPPRESSION OF THE FULSATILE ENDOMETRIAL RELEASE OF THE LUTEOLYTIC HORMONE PROSTAGLANDIN EZ-ALPHA, HINDERING THE REGRESSION OF THE CORPUS LUTEUM (LUTEOLYSIS) AND THEREFORE A RETURN TO OVARIAN VYCLICITY. THIS, AND A POSSIBLE DIRECT EFFECT OF IFN-TAU ON PROSTAGLANDIN SYNTHESIS, LEADS IN TURN TO CONTINUED OVARIAN PROGESTERONE SECRETION, WICH STIMULATES THE SECRETION BY THE ENDOMETRIUM OF THE NUTRIENTS REQUIRED FOR THE GROWTH OF THE CONCEPTUS. IN SUMMARY, DISPLAYS PARTICULARLY HIGH ANTIVIRAL AND ANTIPROLIFERATIVE POTENCY CONCURRENTLY WITH PARTICULAR WEAK CYTOTOXICITY, HIGH ANTILUTEDLYTIC ACTIVITY AND IMMUNOMOULLATORY OF THE NUTRIENT THE CONCEPTUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               THEY ENCODE FOR PROTEINS VERY SIMILAR IN SEQUENCE BUT WITH DIFFERENT BIOLOGICAL POTENCY AND PATTERN OF EXPRESSION. SIMILARITY: BELONGS TO THE INTERFERON ALPHA, BETA AND DELTY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CONCEPTUS DURING A VERY SHORT PERIOD IN EARLY PREGNANCY.
MISCELLANEOUS: IRN-TAU GENES ARE INTRONLESS. THEY EVOLUED FROM
IFN-OMEGA GENES IN THE RUMINANTIA SUBORDER AND HAVE CONTINUED TO
DUPLICATE INDEPENDENTLY IN DIFFERENT LINEAGES OF THE RUMINANTIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: PARACRINE HORMONE PRIMARLY RESPONSIBLE FOR MATERNAL

Flt3-L stimulates production of progenitor and stem cells, and can be used e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A method has been developed of initiating or enhancing: (i) an antigen-
CC specific immune tolerance; or (ii) immunotolerance of a therapeutic
CI immunogenic molecule by addition of a polypeptide, before, after or with
CC the mucosal administration of an immunotolerising amount of the antigen
CC or therapeutic molecule, respectively. The polypeptide is capable of
CD binding the filt3 receptor and is: a) amino acids 28 x of murine filt3
CC ligand (filt3-L), where x is an amino acid between 163-231; b) amino
CC acids 28 y of human filt3-L, where y is an amino acid between 160-235;
CC and C) a polypeptide that has at least 90% identity to the polypeptides
CC of either (a) or (b). The method ameliorates the effects of autoimmune
CC diseases, food allergies or organ or tissue rejection following
CC transplantation. Administration of filt3-L allows lower doses of antigens
CC to be used in vivo for mucosally administered antigens. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 231;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compositions comprising the polynucleotides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, glioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of:
(a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis E and C in humans), parasitic (e.g. malaria) and fungal infections;
(b) autoimmune diseases (e.g. rheumatoid arthritis and osteoarthritis); (c) cancer; and (d) Aujeszky's disease in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polynucleotide may encode the present full-length murine Flt 3 ligand polypeptide, or amino acids 28-163, 1-163, 28-189 or 1-189 of the Flt-3 ligand. The polynucleotides are incorporated into the cells of the vertebrate in vivo, and a prophylactically or therapeutically effective amount of Flt-3 ligand and 1 or more antigens or cytokines is produced in vivo.                                                                                                                                                                                                                                                                                                                                                          A cDNA library from the human stromal cell line 29SV48, in pME18S, was screened with an 800 bp fragment derived from mouse clone T118. This fragment encompasses the coding region conserved between two mouse clones, T118 and T110. Approx. 20 positive clones were selected and partially sequenced. Two clones, S86 and S109, were found to be approx. 75% homologous to the mouse clones over the first 163 AAs. Clone S86 continued to show homology to T110 until the stop codon, although to a lesser degree, for an overall homology of 66%. Clones T118 and clone to the beautiful the stop codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (INRM )
                                                                                                                                                                                                                                                                                                    $109 do not show homology to each other or to the other clones after mouse residue 163 (human residue 160). An additiona mouse clone designated MBB has a 29 AA insert at the junction between the common and divergent portions of the mouse ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11; page 79-80;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
```

used in construction of a chimeric polypeptide comprising: (a) a first polypeptide domain containing a carboxy terminal fragment of a heat shoc protein (HSP), an FIt-3 ligand (FL), a cytoplasmic translocation domain of a Pseudomonas exotoxin A (ETA dII), or a granulocyte-macrophage color stimulating factor (GM-CSF); and (b) a second polypeptide domain containing an antigenic polypeptide. A composition comprising the chimeric polypeptide is useful for inducing an immune response such as a containing an antigenic polypeptide.

a heat shock

colony

The sequence represents the amino acid sequence of Flt-3 ligand (FL)

These are thus useful for vaccinating a mammal against infection by inducing an immune response to a pathogen. Preferably they are useful for vaccinating a mammal against a tumour antigen. The compositions and methods are useful for stimulating or enhancing the immunogenicity of a selected antigen or stimulating or enhancing a cellular immune response specific for that antigen. The chimeric nucleic acid molecules and vaccination methods, yield potent antigen-specific immunotherapy. The polynucleotides and DNA vaccines can induce a cellular immune response that is at least 40 fold more potent than conventional DNA vaccines. The vaccines are safe and useful for administration to domesticated or agricultural animals, as well as humans, and have low immunogenicity.

immune response of a vertebrate to an antigen or a cytokine by administering in vivo, into a tissue of a vertebrate, a Pit-3 ligand-encoding polynucleotide, such as VR6200, and 1 or more antigen- or cytokine-encoding polynucleotides. The polynucleotides are incorporated into the cells of the vertebrate in vivo, and a prophylactically or therapeutically effective amount of Pit-3 ligand and 1 or more antigens or cytokines is produced in vivo. Pharmaceutical compositions comprising the polynucleotides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, gliona or lymphoma, particularly B-cell lymphoma. The co-injection of VR6200 and tumour-specific antigen-encoding plasmid vR1623 into mice significantly enhanced protection from tumour challenge. The claimed pharmaceutical compositions can also be used for the prophylactic and/or therapeutic treatment of:

(a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis B and C in humans), parasitic (e.g. malaria) and fungal infections; (b) autoimmune diseases (e.g. rheumatoid arthritis and osteoarthritis); (c) cancer; and (d) Aujeszky's disease in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a secreted form of mouse Fms-li tyrosine kinase (Flt-3 ligand), lacking the transmembrane and cytoplasmic domains of the full-length form (see AAB20186). Th secreted form of the Flt-3 ligand is expressed by vector VR6200 (see AAF30313). The invention is directed to enhancing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunogenic compositions comprising Flt-3 ligand encoding polynuclectide and one or more antigen, or cytokine encoding polynucleotides, useful for suppressing tumour growth and for treating autoimmune diseases (e.g. rheumatoid arthritis) -
                                                                             Various other examples of these diseases are given in the

                                                                                                                                                                                                                                                                                                                                                                                                              antigens or cytokines is produced in vivo. Pharmaceutical compositions comprising the polynuclectides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, glioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of:

(a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis B and C in humans), parasitic (e.g. malaria) and fungal infections;

(b) autoimmune diseases (e.g. rheumatoid arthritis and osteoarthritis); (c) cancer; and (d) Aujeszky's disease in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of mouse Fms-like tyrosine kinase (Flt-3 ligand). The invention is directed to enhancing the immune response of a vertebrate to an antigen or a cytokine by administering in vivo, into a tissue of a vertebrate, a Flt-3 ligand-encoding polynucleotide, and 1 or more antigen- or cytokine-encoding polynucleotides. The Flt-3 ligand-encoding cytokine-encoding polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogenic compositions comprising Flt-3 ligand encoding polynucleotide and one or more antigen, or cytokine encoding polynucleotides, useful for suppressing tumour growth and for treating autoimmune diseases (e.g. rheumatoid arthritis) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-123319/13

```
immune response of a vertebrate to an antigen or a cytokine by cadministering in vivo, into a tissue of a vertebrate, a Flt-3 ligand-encoding polynucleotide, and 1 or more antigen- or cytokine-encoding polynucleotides, and 1 or more antigen- or polynucleotide may encode the present sequence or the mature polynucleotide may encode the present sequence or the mature polynucleotide are incorporated into the cells of the vertebrate in vivo, and a prophylactically or therapeutically effective amount of Flt-3 ligand and 1 or more antigens or cytokines is produced in vivo. Pharmaceutical compositions comprising the polynucleotides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, cylioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of: (a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis B cand C in humans), parasitic (e.g. malaria) and fungal infections; (b) autolimnune diseases (e.g. rheumatoid arthritis and

Sequences AAY58204 and AAY58206-Y58209 resepctively represent encoded, mature, clone 1 and clone 19 canine Flt-3 ligand, while sequences AAY58210-Y58211 represent encoded and mature feline Flt-3 ligand. The invention relates to canine interleukin-4 (IL-4), canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD54 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony stimulating factor (GMCSF), and nuclectides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as

They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers an as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug targetting.

Two positive clones, S86 and S109, were found to be approx. 75% homologous to the mouse clones over the first 163 AAs. Clone S86 continued to show homology to T110 until the stop codon, although to a lesser degree, for an overall homology of 66%. Clones T118 and S109 do not show homology to each other or to the other clones after mouse residue 163 (human residue 160). An additiona mouse clone designated MBB has a 29 AA insert at the junction between the common and divergent portions of the mouse ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A cDNA library from the human stromal cell line 29SV48, in pME18S, was screened with an 800 bp fragment derived from mouse clone T118. This fragment encompasses the coding region conserved between two mouse clones, T118 and T110. Approx. 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 11; Page 76-77; 90pp; English.

                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ligand-encoding polynucleotide, and 1 or more antiger or cytokine-encoding polynucleotides. The Fit-3 ligand-encoding polynucleotides. The Fit-3 ligand-encoding polynucleotides are incorporated into polynucleotide may encode the present full-length human Fit-3 confidence of the Fit-3 ligand. The polynucleotides are incorporated into the cells of the vertebrate in vivo, and a prophylactically or therapeutically effective amount of Fit-3 ligand and 1 or more antigens or cytokines is produced in vivo. Pharmaceutical compositions comprising the polynucleotides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, galioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of:

(a) bacterial (e.g. Bacillus infections), vital (e.g. hepatitis B and C in humans), parasitic (e.g. malaria) and fungal infections;
                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Flt-3 stimulates progenitor and stem cells, and can be used e.g. in gene therapy protocols.

                                                                                                                                                                                                                                                                                              A method has been developed of initiating or enhancing: (i) an antigen-
CC specific immune tolerance; or (ii) immunotolerance of a therapeutic
CC immunogenic molecule by addition of a polypeptide, before, after or with
CC the mucosal administration of an immunotolerising amount of the antigen
CC threapeutic molecule, respectively. The polypeptide is capable of
CC binding the flt3 receptor and is: a) amino acids 28-x of murine flt3
CC ligand (flt3-L), where x is an amino acid between 163-231; b) amino
CC acids 28-y of human flt3-L, where y is an amino acid between 160-235;
CC and c) a polypeptide that has at least 90% identity to the polypeptides
CC diseases, food allergies or organ or tissue rejection following
CC transplantation. Administration of flt3-L allows lower doses of antigens
CC to be used in vivo for mucosally administered antigens. The present
